DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-20, drawn to a radiation detector comprising a first photon incident surface, a second photon incident surface and a scintillator array extending from the first photon incident surface to the second photon incident surface, classified in class 250, subclass 366
- II. Claims 21-23, drawn to a projection radiography imaging system comprising a first and second detector array wherein the second detector array is offset from the first detector array by approximately one-half detector pitch, classified in class 378, subclass 62.
 - The Examiner points out claim 21 includes the limitation of "the second detector is offset from the first detector by approximately one-half pitch normal to the incident x-ray direction", therefore the source of the projection radiography has been interpreted as an x-ray source.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other

Art Unit: 2882

combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because it does not require a scintillator array extending from the first detector to the second detector within the projection radiography imaging system. The subcombination has separate utility such as within a system utilizing any high-energy source other than x-ray, for example neutrons or gamma rays.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
